

DETECTION OF NON-VIRAL ORGANISMS WITH SRP RNA

ABSTRACT OF THE DISCLOSURE

5 The present invention provides rapid detection methods that detect virtually
all non-viral organisms, from a broad to a narrow spectrum. More particularly, the present
invention provides SRP RNA nucleic acid probes and methods of using such nucleic acid
probes for the rapid, sensitive detection of non-viral organisms such as bacteria, fungi, and
protozoa. Using the detection methods of the present invention, major non-viral groups such
10 as bacterial, fungi, and protozoa, as well as specific species, can be identified in samples. In
addition, kits for use in carrying out the methods of the present invention are provided.
